Single Variable Regression — Forecasts

Practice Assignment • 10 min

Due Jul 20, 11:59 PM +07

Your grade: 100%

Your latest: **100%** • Your highest: **100%**

To pass you need at least 80%. We keep your highest score.

Next item →

1. **Consider a single variable regression, where the variable, *Sales*, depends on the variable, *Income*. Suppose that the intercept is 1000, and the coefficient of the x-variable is 0.6, what is the equation that will be used for forecasting?** 1 / 1 point

- Income = 1000 + 0.6*Sales
- Sales = 0.6 + 1000*Income.
- Income = 0.6 + 1000*Sales
- Sales = 1000 + 0.6*Income

Nice work

Yes, this is correct.

2. **Suppose we are referring to the regression equation from the previous question. What is the forecast for *Sales* if *Income* is 100,000 units?** 1 / 1 point

- 59,000 units
- 61,000 units
- 60,000 units
- 62,000 units

Nice work

Yes, this is correct.
