Single Variable Regression — Tests

Practice Assignment • 10 min

Due Jul 20, 11:59 PM +07

Your grade: 100%

Your latest: **100%** • Your highest: **100%**

To pass you need at least 80%. We keep your highest score.

1. **The way to verify that our regression equation is valid for forecasting is by considering whether we have generated statistically significant results.** 1 / 1 point

   For the slope coefficient the easiest way to do this is by considering its P-value.

   Our regression equation is valid for forecasting if:

   - This P-value < 2
   - This P-value < 0.05
   - This P-value > 0.05
   - This P-value > 2

   Nice work

   Yes, this is correct.

2. **For regressions, we do not need to manually calculate the Mean Squared Error, by calculating the errors row-by-row.** 1 / 1 point

   The regression output effectively calculates the Mean Squared Error, and this is referred to as the _____.

   The regression output effectively calculates the Root Mean Squared, and this is referred to as the _____, which is a measure of the average error.

   - Mean Squared Residual; Standard Error
   - Sum of Squares Regression; R Square
