Multiple Variable Regression — Forecasts

Practice Assignment • 10 min

Due Jul 20, 11:59 PM +07

Your grade: 100%

Your latest: **100%** • Your highest: **100%**

To pass you need at least 80%. We keep your highest score.

Next item →

1. **Suppose that the number of houses constructed, *Houses*, depended on both the *Interest_Rate* and *Income*. Suppose the regression equation that is used to forecast is:**

   Houses = 10000 – 4000*Interest_Rate + 7*Income

   Forecast Houses, when the Interest Rate is 0.1 and Income is 100,000. Houses will equal:

   - 409,600
   - 709,600
   - 409,700
   - 709,400

   1 / 1 point

   Nice work

   Yes, this is correct.

2. **Suppose that the number of houses constructed, *Houses*, depended on both the *Interest_Rate* and *Income*. Suppose the regression equation that is used to forecast is:**

   Houses = 10000 – 4000*Interest_Rate + 7*Income

   Suppose that we used a bubble chart to represent this graphically.

   Where would the forecast be on our chart, if we forecast Houses based on the
