Binary Dummy Regression — Forecasts

Practice Assignment • 10 min

Due Jul 22, 11:59 PM +07

Your grade: 100%

Your latest: **100%** • Your highest: **100%**

To pass you need at least 80%. We keep your highest score.

1. **Suppose we are forecasting *House Rent* using the regression equation:** 1 / 1 point

House Rent = 2000 - 70*Distance_from_City + 200*Train

Where *Distance_from_city* is measured in kilometres, and *Train* is a binary dummy variable which can be true (if there is a train station nearby) or false (if there is no train station nearby).

(Note: No house is further than 25 kilometres from the city.)

Calculate the House Rent if the house is 20 kilometres from the city and has a train station nearby. What is the value of the House Rent?

- 2000
- 600
- 2200
- 800 (selected)

✓ Nice work

Yes, this is correct.

2. **Suppose we are forecasting *House Rent* using the regression equation:** 1 / 1 point

House Rent = 2000 - 70*Distance_from_City + 200*Train

Where *Distance_from_city* is measured in kilometres, and *Train* is a binary
